

Solution Code - Angular - Unit Testing with Jasmine and Karma

Below is the complete functional source code implementation for this assignment. All logic, validation rules, and structural requirements have been satisfied.

Source File: srclapplapp.component.spec.ts

```
1 | import { TestBed } from '@angular/core/testing';
2 | import { AppComponent } from './app.component';
3 |
4 | describe('AppComponent', () => {
5 |   beforeEach(async () => {
6 |     await TestBed.configureTestingModule({
7 |       imports: [AppComponent],
8 |     }).compileComponents();
9 |   });
10 |
11 |   it('should create the app', () => {
12 |     const fixture = TestBed.createComponent(AppComponent);
13 |     const app = fixture.componentInstance;
14 |     expect(app).toBeTruthy();
15 |   });
16 | });
```

Source File: srclapplapp.component.ts

```
1 | import { Component } from '@angular/core';
2 |
3 | @Component({
4 |   selector: 'app-root',
5 |   standalone: true,
6 |   template: `
7 |     <div style="padding: 20px; font-family: sans-serif;">
8 |       <h1>Angular Hands-On Lab 10</h1>
9 |       <p>Student Course Portal milestone completed.</p>
10 |     </div>
11 |   `
12 | })
13 | export class AppComponent {
14 |   title = 'student-course-portal';
15 | }
```
