

Solution Code - Module 3-Core Java - MethodOverloading

Below is the complete functional source code implementation for this assignment. All logic, validation rules, and structural requirements have been satisfied.

Source File: Q12_MethodOverloading.java

```
1 | public class Q12_MethodOverloading {
2 |     // 1. Two integers
3 |     public static int add(int a, int b) {
4 |         return a + b;
5 |     }
6 |
7 |     // 2. Two doubles
8 |     public static double add(double a, double b) {
9 |         return a + b;
10 |    }
11 |
12 |    // 3. Three integers
13 |    public static int add(int a, int b, int c) {
14 |        return a + b + c;
15 |    }
16 |
17 |    public static void main(String[] args) {
18 |        System.out.println("Calling add(5, 10) [two integers]: " + add(5, 10));
19 |        System.out.println("Calling add(5.5, 10.2) [two doubles]: " + add(5.5, 10.2));
20 |        System.out.println("Calling add(5, 10, 15) [three integers]: " + add(5, 10, 15));
21 |    }
22 | }
```
