

Solution Code - Module 1-HTML 5 - Geolocation_for_Event_Mapping

Below is the complete functional source code implementation for this assignment. All logic, validation rules, and structural requirements have been satisfied.

Source File: index.html

```
1 | <!DOCTYPE html>
2 | <html lang="en">
3 | <head>
4 |     <meta charset="UTF-8">
5 |     <title>Geolocation - Event Portal</title>
6 |     <script>
7 |         function findEvents() {
8 |             let output = document.getElementById("geoOutput");
9 |             if (!navigator.geolocation) {
10 |                 output.innerText = "Geolocation is not supported.";
11 |                 return;
12 |             }
13 |             output.innerText = "Locating...";
14 |             navigator.geolocation.getCurrentPosition(
15 |                 function(pos) {
16 |                     output.innerText = "Latitude: " + pos.coords.latitude + "\nLongitude: " +
pos.coords.longitude;
17 |                 },
18 |                 function(err) {
19 |                     output.innerText = "Error: " + err.message;
20 |                 },
21 |                 { enableHighAccuracy: true, timeout: 5000 }
22 |             );
23 |         }
24 |     </script>
25 | </head>
26 | <body>
27 |     <h2>Find Nearby Events</h2>
28 |     <button onclick="findEvents()">Find Nearby Events</button>
29 |     <pre id="geoOutput" style="margin-top: 15px; font-weight: bold;"></pre>
30 | </body>
31 | </html>
```
