

Solution Code - Engineering concepts - DesignPatterns - Adapter_Pattern

Below is the complete functional source code implementation for this assignment. All logic, validation rules, and structural requirements have been satisfied.

Source File: PaymentAdapter.java

```
1 | interface PaymentProcessor { void process(double amt); }
2 | class ThirdPartyGateway { public void makePayment(double amt) { System.out.println("Paid " + amt); } }
3 |
4 | class PaymentAdapter implements PaymentProcessor {
5 |     private ThirdPartyGateway gateway;
6 |     public PaymentAdapter(ThirdPartyGateway g) { this.gateway = g; }
7 |     public void process(double amt) { gateway.makePayment(amt); }
8 | }
```
