

Design Pattern 10: MVC Pattern

Exercise 10: Implementing the MVC Pattern

Scenario:

You are developing a simple web application for managing student records using the MVC pattern.

Steps:

Create a New Java Project:

Create a new Java project named MVCPatternExample.

Define Model Class:

Create a class Student with attributes like name, id, and grade.

Define View Class:

Create a class StudentView with a method displayStudentDetails().

Define Controller Class:

Create a class StudentController that handles the communication between the model and the view.

Test the MVC Implementation:

Create a main class to demonstrate creating a Student, updating its details using StudentController, and displaying them using StudentView.
