

Solution Code - Module 2-ANSI SQL Using MySQL - Most_Active_Cities

Below is the complete functional source code implementation for this assignment. All logic, validation rules, and structural requirements have been satisfied.

Source File: [solution.sql](#)

```
1 | SELECT city, COUNT(DISTINCT user_id) as registrations_count FROM Registrations r JOIN Events e ON  
r.event_id = e.event_id GROUP BY city ORDER BY registrations_count DESC LIMIT 5;
```
