

Interactive Form Event Handling

6. Event Feedback with Events Handling

Scenario: Collect real-time feedback and interactions from the user.

Objective: Handle blur, change, click, double-click, and keyboard events.

Task:

- Use onblur to validate a phone number field
- Use onchange on a dropdown to display the selected event fee
- onclick on a submit button to show a confirmation
- ondblclick on an image to enlarge it
- Capture key events in the feedback textarea and count characters
