

## React HandsOn 2: Multi Component Layout

---

### Objectives

Explain React components

Identify the differences between components and JavaScript functions

Identify the types of components

Explain class component

Explain function component

Define component constructor

Define render() function

In this hands-on lab, you will learn how to:

Create a class component

Create multiple components

Render a component

### Prerequisites

The following is required to complete this hands-on lab:

Node.js

NPM

Visual Studio Code

### Notes

Estimated time to complete this lab: 30 minutes.

Create a React app for Student Management Portal named StudentApp and create a component named Home which will display the Message "Welcome to the Home page of Student Management Portal". Create another component named About and display the Message "Welcome to the About page of the Student Management Portal". Create a third component named Contact and display the Message "Welcome to the Contact page of the Student Management Portal". Call all the three components.

Create a React project named "StudentApp" type the following command in terminal of Visual studio:

Create a new folder under Src folder with the name "Components". Add a new file named "Home.js"

Type the following code in Home.js

Under Src folder add another file named "About.js"

Repeat the same steps for Creating "About" and "Contact" component by adding a new file as "About.js", "Contact.js" under "Src" folder and edit the code as mentioned for "Home" Component.

Edit the App.js to invoke the Home, About and Contact component as follows:

In command Prompt, navigate into StudentApp and execute the code by typing the following command:

Open browser and type "localhost:3000" in the address bar:
