

Git Lab 1: Git Configuration and Basics

Objectives

Familiar with Git commands like git init, git status, git add, git commit, git push, and git pull.

In this hands-on lab, you will learn how to

Setup your machine with Git Configuration

Integrate notepad++.exe t- Git and make it a default editor

Add a file t- source code repository

Prerequisites

Install Git Bash client in your machine

Notes*:

Estimated time t- complete this lab: 30 minutes.

Step 1: Setup your machine with Git Configuration

T- create a new repository, signup with GitLab and register your credentials

Login t- GitLab and create a "GitDemo" project

T- check if Git client is installed properly: Open Git bash shell and execute

If output shows Git with its version information that indicates, that Git Client installs properly.

T- configure user level configuration of user ID and email ID execute

T- check if the configuration is properly set, execute the following command.

Step 2: Integrate notepad++.exe t- Git and make it a default editor

T- check, if notepad++.exe execute from Git bash

If Git bash could not able t- recognize notepad++ command that implies notepad++.exe is not added t- the environment path variable.

T- add path of notepad++.exe t- environment variable, g- t- control panel -> System -> Advanced System settings. G- t- Advanced tab -> Environment variables -> Add path of notepad++.exe t- the path user variable by clicking on "Edit"

Exit Git bash shell, open bash shell and execute

Now, notepad++ will open from Git bash shell

T- create an alias command for notepad++.exe, execute

It will open notepad++ from bash shell, and create a user profile by adding the line in notepad++

T- configure the editor, execute the command

T- verify if notepad++ is the default editor, execute the command

Here ?-e' option implies editor

It will show the entire global configuration as shown below,

Step 3: Add a file t- source code repository

Open Git bash shell and create a new project "GitDemo" by executing the command

Git bash initializes the "GitDemo" repository. T- verify, execute the command

It will display all the hidden files in the Git "working directory".

Git Lab 1: Git Configuration and Basics

T- create a file "welcome.txt" and add content t- the file, execute the command

T- verify if the file "welcome.txt" is created, execute

T- verify the content, execute the command

Check the status by executing

Now the file "welcome.txt" is available in Git "working directory"

T- make the file t- be tracked by Git repository, execute the command

T- add multi line comments, we are opening default editor t- comment. Execute the command

Notepad++ editor will open and t- add multi-line comment with default editor

T- check if local and "Working Directory" git repository are same, execute git status

welcome.txt is added t- the local repository.

Signup with GitLab and create a remote repository "GitDemo"

T- pull the remote repository, execute

git pull origin master

T- push the local t- remote repository, execute

git push origin master

Please follow the below steps for creating a free account in GitHub.

Don't use cognizant credentials t- login t- GitHub.
