

Solution Code - Module 3-Core Java - MultiplicationTable

Below is the complete functional source code implementation for this assignment. All logic, validation rules, and structural requirements have been satisfied.

Source File: Q05_MultiplicationTable.java

```
1 | import java.util.Scanner;
2 |
3 | public class Q05_MultiplicationTable {
4 |     public static void main(String[] args) {
5 |         Scanner scanner = new Scanner(System.in);
6 |         System.out.print("Enter a number for its multiplication table: ");
7 |         if (scanner.hasNextDouble()) {
8 |             double number = scanner.nextDouble();
9 |             System.out.println("Multiplication Table for " + number + ":");
10 |             for (int i = 1; i <= 10; i++) {
11 |                 System.out.printf("%.2f x %d = %.2f\n", number, i, number * i);
12 |             }
13 |         } else {
14 |             System.out.println("Error: Invalid number.");
15 |         }
16 |         scanner.close();
17 |     }
18 | }
```
