

Git Lab 3: Git Branching and Merging

Objectives

Explain branching and merging

Explain about creating a branch request in GitLab

Explain about creating a merge request in GitLab

In this hands-on lab, you will learn how to:

Construct a branch, d- some changes in the branch, and merge it with master (or trunk)

Prerequisites

The following are the pre-requisites t- complete this hands-on lab:

Setting up Git environment with P4Merge tool for Windows

Notes*:

Estimated time t- complete this lab: 30 minutes.

Please follow the instruction t- complete the hands-on. Each instruction expects a command for the Git Bash.

Branching:

Create a new branch "GitNewBranch".

List all the local and remote branches available in the current trunk. Observe the "*" mark which denote the current pointing branch.

Switch t- the newly created branch. Add some files t- it with some contents.

Commit the changes t- the branch.

Check the status with "git status" command.

Merging:

Switch t- the master

List out all the differences between trunk and branch. These provide the differences in command line interface.

List out all the visual differences between master and branch using P4Merge tool.

Merge the source branch t- the trunk.

Observe the logging after merging using "git log -oneline -graph -decorate"

Delete the branch after merging with the trunk and observe the git status.

Please follow the below steps for creating a free account in GitHub.

D- not use cognizant credentials t- login t- GitHub.
