

Solution Code - Spring REST using Spring Boot - REST_Hello_Endpoint

Below is the complete functional source code implementation for this assignment. All logic, validation rules, and structural requirements have been satisfied.

Source File: `src\main\java\com\example\rest\RestApplication.java`

```
1 | package com.example.rest;
2 |
3 | import org.springframework.boot.SpringApplication;
4 | import org.springframework.boot.autoconfigure.SpringBootApplication;
5 | import org.springframework.web.bind.annotation.*;
6 |
7 | @RestController
8 | @RequestMapping("/api")
9 | class HelloController {
10 |     @GetMapping("/hello")
11 |     public String sayHello() {
12 |         return "Hello, Welcome to Spring RESTful Web Services!";
13 |     }
14 | }
15 |
16 | @SpringBootApplication
17 | public class RestApplication {
18 |     public static void main(String[] args) {
19 |         SpringApplication.run(RestApplication.class, args);
20 |     }
21 | }
```
