

Solution Code - React - Life_Cycle_Hooks_Fetch_Posts

Below is the complete functional source code implementation for this assignment. All logic, validation rules, and structural requirements have been satisfied.

Source File: src\App.js

```
1 | import React, { Component } from 'react';
2 |
3 | export default class App extends Component {
4 |     state = { posts: [], loading: true };
5 |
6 |     componentDidMount() {
7 |         fetch('https://jsonplaceholder.typicode.com/posts?_limit=5')
8 |             .then(res => res.json())
9 |             .then(data => this.setState({ posts: data, loading: false }));
10 |    }
11 |
12 |    render() {
13 |        return (
14 |            <div style={{ padding: '20px' }}>
15 |                <h2>JSON Posts list</h2>
16 |                {this.state.loading ? <p>Loading...</p> : (
17 |                    <ul>
18 |                        {this.state.posts.map(p => <li key={p.id}>{p.title}</li>)}
19 |                    </ul>
20 |                )}
21 |            </div>
22 |        );
23 |    }
24 | }
```
