

Solution Code - Engineering concepts - DesignPatterns - Singleton_Pattern

Below is the complete functional source code implementation for this assignment. All logic, validation rules, and structural requirements have been satisfied.

Source File: **Logger.java**

```
1 | public class Logger {
2 |     private static Logger instance;
3 |     private Logger() {}
4 |     public static synchronized Logger getInstance() {
5 |         if (instance == null) instance = new Logger();
6 |         return instance;
7 |     }
8 |     public void log(String msg) { System.out.println("[LOG]: " + msg); }
9 | }
```
