

React HandsOn 6: React Router Trainers List

Objectives

Explain the need and benefits of React Router

Identify the Components in React Router

List the types of Router Components

Parameter passing via url

In this hands-on lab, you will learn how to:

Implement a Simple Navigation Menu

Add Basic Routes (install, configure)

Use Routes in React Applications

Prerequisites

The following is required to complete this hands-on lab:

Node.js

NPM

Visual Studio Code

Notes

Estimated time to complete this lab: 60 minutes.

Cognizant Academy teams want to maintain a list of trainers along with their expertise in a SPA using React as the technology. You are assigned the task of creating this React app.

The following trainers' data application will deal.

T-ID

Name

Phone

Email

Stream

Skills

Create a new React app using create-react-app tool with the name as "TrainersApp"

Open the application using the VS Code

Add a new file called trainer.js inside the src folder and define a class named as "Trainer" with the following properties

TrainerId

Name

Email

Phone

Technology

Skills

Figure 2: Trainer.js

React HandsOn 6: React Router Trainers List

Create a new TrainersMock.js file which will contain the mock trainer data. Refer the following screenshot for mock data

Figure 3: TrainersMock.js

Install the support for React router for the dom. Execute the following command.

Figure 4: Install React Router

Create new component named as TrainersList inside Trainerlist.js file. The component should accept the trainer's data as parameter and render it as a list. The list should display names of each trainers which must be clickable like a hyper link. Refer the following screenshot for the component layout.

Figure 5: TrainersList Component

Create a new component named as Home inside Home.js which will be responsible for displaying the following

Figure 6: Home Component

Modify the App component t- add support for routing and defining the navigation links t- Home component and TrainersList component. Use BrowserRouter, Routes, Route and Link components from the react-router-dom library.

Define the following URL

/ - must redirect t- home component

/trainers - must redirect t- trainers list component.

The layout of the page must be similar t- the following

Figure 7: App Component

Create a new component named TrainerDetail in TrainerDetails.js file.

The component should retrieve a parameter named id from the URL with the help of "useParams" hook from the React router DOM library.

It should query the mock trainer data using the id and display the trainer details as show in screenshot.

Modify the TrainersList component t- add Links t- TrainerDetail component while passing the ID. Define a route in App component for the same.

Figure 8: Trainers Detail Component

Build and run the application. The complete layout of the application will look as follows.

Figure 9: Home
