

React HandsOn 3: Functional Component Score Calculator

Objectives

Explain React components

Identify the differences between components and JavaScript functions

Identify the types of components

Explain class component

Explain function component

Define component constructor

Define render() function

In this hands-on lab, you will learn how to:

Create a function component

Apply style to components

Render a component

Prerequisites

The following is required to complete this hands-on lab:

Node.js

NPM

Visual Studio Code

Notes

Estimated time to complete this lab: 30 minutes.

Create a React app for Student Management Portal named `scorecalculatorapp` and create a function component named "CalculateScore" which will accept Name, School, Total and goal in order to calculate the average score of a student and display the same.

Create a React project named "scorecalculatorapp" type the following command in terminal of Visual studio:

Create a new folder under Src folder with the name "Components". Add a new file named "CalculateScore.js"

Type the following code in CalculateScore.js

Create a Folder named Stylesheets and add a file named "mystyle.css" in order to add some styles to the components:

Edit the App.js to invoke the CalculateScore functional component as follows:

In command Prompt, navigate into scorecalculatorapp and execute the code by typing the following command:

Open browser and type "localhost:3000" in the address bar:
