

Solution Code - Module 3-Core Java - DataTypeDemonstration

Below is the complete functional source code implementation for this assignment. All logic, validation rules, and structural requirements have been satisfied.

Source File: Q06_DataTypeDemonstration.java

```
1 | public class Q06_DataTypeDemonstration {  
2 |     public static void main(String[] args) {  
3 |         int intVar = 42;  
4 |         float floatVar = 3.14f;  
5 |         double doubleVar = 2.7182818284;  
6 |         char charVar = 'J';  
7 |         boolean booleanVar = true;  
8 |  
9 |         System.out.println("Integer value: " + intVar);  
10 |        System.out.println("Float value: " + floatVar);  
11 |        System.out.println("Double value: " + doubleVar);  
12 |        System.out.println("Character value: " + charVar);  
13 |        System.out.println("Boolean value: " + booleanVar);  
14 |    }  
15 | }
```
