

Algorithm 4: Employee Management System

Exercise 4: Employee Management System

Scenario:

You are developing an employee management system for a company. Efficiently managing employee records is crucial.

Steps:

Understand Array Representation:

Explain how arrays are represented in memory and their advantages.

Setup:

Create a class Employee with attributes like employeeid, name, position, and salary.

Implementation:

Use an array to store employee records.

Implement methods to add, search, traverse, and delete employees in the array.

Analysis:

Analyze the time complexity of each operation (add, search, traverse, delete).

Discuss the limitations of arrays and when to use them.
