

Solution Code - Engineering concepts - Algorithms_DataStructures - Employee_Management_System

Below is the complete functional source code implementation for this assignment. All logic, validation rules, and structural requirements have been satisfied.

Source File: EmployeeArray.java

```
1 | class Employee {
2 |     String id;
3 |     String name;
4 |     public Employee(String id, String name) { this.id = id; this.name = name; }
5 | }
6 |
7 | public class EmployeeArray {
8 |     private Employee[] arr = new Employee[100];
9 |     private int size = 0;
10 |
11 |     public void add(Employee e) { if (size < arr.length) arr[size++] = e; }
12 |     public Employee search(String id) {
13 |         for (int i = 0; i < size; i++) if (arr[i].id.equals(id)) return arr[i];
14 |         return null;
15 |     }
16 |     public void delete(String id) {
17 |         for (int i = 0; i < size; i++) {
18 |             if (arr[i].id.equals(id)) {
19 |                 arr[i] = arr[size - 1];
20 |                 arr[size - 1] = null;
21 |                 size--;
22 |                 return;
23 |             }
24 |         }
25 |     }
26 | }
```
