

Solution Code - React - Mocking_Axios_Jest_GitClient

Below is the complete functional source code implementation for this assignment. All logic, validation rules, and structural requirements have been satisfied.

Source File: src\App.js

```
1 | import React, { useState } from 'react';
2 | import axios from 'axios';
3 |
4 | export default function App() {
5 |     const [repos, setRepos] = useState([]);
6 |
7 |     const fetchRepos = () => {
8 |         axios.get('https://api.github.com/users/octocat/repos')
9 |             .then(res => setRepos(res.data));
10 |    };
11 |
12 |    return (
13 |        <div style={{ padding: '20px' }}>
14 |            <button onClick={fetchRepos}>Fetch Github Repos</button>
15 |            <ul>{repos.map(r => <li key={r.id}>{r.name}</li>)}</ul>
16 |        </div>
17 |    );
18 | }
```
