

React HandsOn 11: Events Increment Decrement Currency

Objectives

Explain React events

Explain about event handlers

Define Synthetic event

Identify React event naming convention

In this hands-on lab, you will learn how to:

Implement Event handling concept in React applications

Use this keyword

Use synthetic event

Prerequisites

The following is required to complete this hands-on lab:

Node.js

NPM

Visual Studio Code

Notes

Estimated time to complete this lab: 90 minutes.

Create a React Application "eventexamplesapp" to handle various events of the form elements in HTML.

Create "Increment" button to increase the value of the counter and "Decrement" button to decrease the value of the counter. The "Increase" button should invoke multiple methods.

To increment the value

Say Hello followed by a static message.

Create a button "Say Welcome" which invokes the function which takes "welcome" as an argument.

Create a button which invokes synthetic event "OnPress" which displays "I was clicked"

Create a "CurrencyConverter" component which will convert the Indian Rupees to Euro when the Convert button is clicked.

Handle the Click event of the button to invoke the handleSubmit event and handle the conversion of the Euro to rupees.
