

Spring Core Exercise 6: XML AOP Logging

Exercise 6: Configuring Beans with Annotations

Scenario:

You need to simplify the configuration of beans in the library management application using annotations.

Steps:

Enable Component Scanning:

Update applicationContext.xml to include component scanning for the com.library package.

Annotate Classes:

Use @Service annotation for the BookService class.

Use @Repository annotation for the BookRepository class.

Test the Configuration:

Run the LibraryManagementApplication main class to verify the annotation-based configuration.
