

Spring Core Exercise 7: Annotation AOP Logging

Exercise 7: Implementing Constructor and Setter Injection

Scenario:

The library management application requires both constructor and setter injection for better control over bean initialization.

Steps:

Configure Constructor Injection:

Update applicationContext.xml t- configure constructor injection for BookService.

Configure Setter Injection:

Ensure that the BookService class has a setter method for BookRepository and configure it in applicationContext.xml.

Test the Injection:

Run the LibraryManagementApplication main class t- verify both constructor and setter injection.
