

Solution Code - React - Forms_Ticket_Raising_Reference

Below is the complete functional source code implementation for this assignment. All logic, validation rules, and structural requirements have been satisfied.

Source File: src\App.js

```
1 | import React, { useState } from 'react';
2 |
3 | export default function App() {
4 |   const [issue, setIssue] = useState('');
5 |   return (
6 |     <div style={{ padding: '20px' }}>
7 |       <h2>Raise Ticket</h2>
8 |       <form onSubmit={(e) => { e.preventDefault(); alert('Ticket Raised: ' + issue); }}>
9 |         <textarea value={issue} onChange={(e) => setIssue(e.target.value)} placeholder="Describe
your issue" />
10 |         <button type="submit">Submit</button>
11 |       </form>
12 |     </div>
13 |   );
14 | }
```
