

Solution Code - Module 3-Core Java - CustomException

Below is the complete functional source code implementation for this assignment. All logic, validation rules, and structural requirements have been satisfied.

Source File: Q21_CustomException.java

```
1 | import java.util.Scanner;
2 |
3 | // Custom Exception class
4 | class InvalidAgeException extends Exception {
5 |     public InvalidAgeException(String message) {
6 |         super(message);
7 |     }
8 | }
9 |
10 | public class Q21_CustomException {
11 |     // Method that throws custom exception
12 |     public static void checkAge(int age) throws InvalidAgeException {
13 |         if (age < 18) {
14 |             throw new InvalidAgeException("Age is less than 18. Access Denied.");
15 |         } else {
16 |             System.out.println("Age is valid. Access Granted.");
17 |         }
18 |     }
19 |
20 |     public static void main(String[] args) {
21 |         Scanner scanner = new Scanner(System.in);
22 |         System.out.print("Enter your age: ");
23 |
24 |         if (scanner.hasNextInt()) {
25 |             int age = scanner.nextInt();
26 |             try {
27 |                 checkAge(age);
28 |             } catch (InvalidAgeException e) {
29 |                 System.out.println("Caught Custom Exception: " + e.getMessage());
30 |             }
31 |         } else {
32 |             System.out.println("Error: Invalid input. Please enter an integer.");
33 |         }
34 |
35 |         scanner.close();
36 |     }
37 | }
```
